Hexagon Purus selected for hydrogen fuel cell project for construction equipment

Hexagon Purus will, for the first time, contribute to the development of zero-emissions equipment in the construction industry. Hexagon Purus will deliver a 700 bar turn-key renewable hydrogen storage system for a demonstration project with a heavy equipment manufacturer to develop a fuel cell powered construction machine. The project will advance the understanding of the viability of hydrogen fuel cell power as a replacement for a traditional internal combustion engine to help reduce greenhouse gas emissions.

Quantum Fuel Systems receives \$22M order for virtual pipeline trailers, including hydrogen

Quantum Fuel Systems, a fully integrated alternative energy company, has been selected by Certarus Ltd. to deliver industry-leading virtual pipeline trailers for natural gas in 2021 with a total value of approximately US\$ 22 million. Certarus will receive Quantum's VPLite45/40' trailers, which have a gaseous capacity of about 472k standard cubic feet and weigh less than 59k pounds fully loaded. The contract includes a development agreement for hydrogen virtual pipeline trailers to be delivered by the end of 2021. Certarus is in active discussions over several potential hydrogen pilot projects in which Quantum will provide trailers to transport hydrogen.

Xebec secures \$59M in credit for renewable natural gas and hydrogen installations

Xebec Adsorption Inc announced today (24th February) that it has secured credit facilities with National Bank of Canada's Technology and Innovation Banking Group for a total value of up to CA\$ 59.25 million. The expanded facilities will provide Xebec with greater financial flexibility and cash management to pursue its growth trajectory and its acquisition strategy to develop a North American and European Cleantech Service Network for its increasing renewable natural gas and hydrogen installations.
